Dev Kumar Dahiya

+91 7404512322 | devdahiya4002@gmail.com | Linkdin | GitHub | Noida

Technical Skill

Frontend: HTML5 , CSS3 , JavaScript , React.JS, Angular.JS
Backend & Databases: Node.js, .NET, REST.API , MySQL, MongoDB , SQL Server
Tools: Git,GitHub , Jupyter Notebook, Visual Studio Code, Postman , Figma , Render , Streamlit , Google Collab, Power BI
FrameWorks & Libraries: OpenCV , Numpy , Pandas , PyTorch , Azure Data Factory/ET
Core: Data Structures, Algorithms, DBMS, OOPS, Operating Systems , Networking
IoT & Data Systems: IoT Architecture (conceptual), Sensor Data Processing, Real-Time Data Streaming, Edge-to-Cloud Integration (conceptual), Data Monitoring & Automation Systems
Soft Skills: Communication,Teamwork,Time Management , Quick Learning, Problem-Solving

Experience

Associate Software Engineer Intern (MAQ Software) ***Nov 2025 – Feb 2026***

- Developed interactive and data-driven dashboards using Power BI to support business intelligence and decision-making.
- Built and optimized backend services using C# and ASP.NET, ensuring efficient and scalable application performance
- Utilized Microsoft Azure for deploying and managing cloud-based solutions and services.
- Worked with Microsoft Fabric for data integration, transformation, and analytics workflows.

Technologies Used: Power BI, Microsoft Azure, C#, ASP.NET, Microsoft Fabric, Angular

AI Intern (Horizon 17 Technologies) ***May 2025 – July 2025***

- Designed and developed an AI-based system to analyze bills/invoices and estimate associated carbon emissions.
- Integrated GROQ and Large Language Models (LLMs) to extract, process, and interpret structured and unstructured data from uploaded documents.
- Built a pipeline to calculate carbon usage metrics and convert them into meaningful environmental insights.
- Visualized carbon footprint data using graphical representations for better understanding and decision-making..

Technologies Used: GROQ, Large Language Models , Natural Language Processing (NLP), Data Extraction, Data Visualization

Projects

Emotion-Based Music Recommendation System link ***Oct 2025- Dec 2025***

Developed a CNN-based facial emotion recognition model achieving ~85% accuracy on test data.

- Implemented real-time emotion detection using OpenCV with live webcam input.
- Designed a recommendation engine that maps multiple emotional states to personalized music playlists, Optimized preprocessing and model performance for reliable real-time predictions.

Technologies Used: Python, PyTorch, OpenCV, CNN, Streamlit, NumPy, Machine Learning

Leave Request Management System link ***Jan 2026-Feb 2026***

Developed a full-stack leave management system for employees and managers to handle leave applications, approvals, and request tracking.

- Implemented role-based authentication and authorization using JWT for secure access to employee and manager dashboards, Built RESTful APIs for user registration, login, profile management, leave submission, leave history, pending approvals, and status updates.
- Integrated MongoDB Atlas for persistent data storage and deployed the frontend on Vercel and backend on Render.

Technologies Used: React, JavaScript, Node.js, Express.js, MongoDB, Mongoose, JWT, Axios, HTML, CSS, Vite

IoT-Based Data Monitoring & Automation System (ADD THIS — VERY IMPORTANT 🔥)

- Designed a **conceptual IoT system** for collecting and processing real-time environmental/sensor data
- Simulated **sensor data ingestion pipeline using Python**, enabling real-time monitoring and alerts
- Built data visualization dashboard to track system metrics and performance
- Demonstrated **edge-to-cloud data flow concepts**, including data collection, processing, and analytics
- Focused on **automation and decision-making using real-time data streams**

Education

Bachelor of Technology in Computer Science **2022 – 2026**
Amity University Noida , Utter Pradesh **CGPA**- 8.5

Publications

Forensic Deepfake Audio Detection Using CNN-Attention Mechanism ***Feb 2026***

International Conference on Intelligent Computing and Communication **(ICICC2026)**

- Leveraged mel-spectrogram, MFCC features, and BiLSTM with attention to enable robust, real-time cross-lingual audio analysis , achieving 99.33% accuracy across multiple accents.
