PROFESSIONAL SUMMARY

Software Engineer with strong foundation in Python, C++, and object-oriented programming, experienced in developing scalable applications, APIs, and data-driven systems. Skilled in debugging, code optimization, and building maintainable software with proper documentation. Hands-on experience in designing and integrating software solutions, collaborating in teams, and delivering high-quality code aligned with best practices.

TECHNICAL SKILLS

Programming: Python, C++, JavaScript

Concepts: Object-Oriented Programming, Data Structures & Algorithms

Software Development: API Development, System Design, Debugging, Code Optimization

Frameworks & Tools: PyTorch, OpenCV, Streamlit, Git, GitHub, Postman

Databases: MongoDB, MySQL

Practices: Unit Testing (basic), Code Documentation, SDLC

EXPERIENCE

Associate Software Engineer Intern – MAQ Software (Nov 2025 – Feb 2026)

- Designed and implemented backend software components using C# and ASP.NET following coding standards
- Debugged and optimized application performance improving response time by ~25%
- Worked on software integration and data pipelines ensuring reliable system performance
- Collaborated with development teams to deliver features and participate in review cycles
- Maintained documentation for workflows and system components

AI Intern – Horizon 17 Technologies (May 2025 – July 2025)

- Developed Python-based applications for processing structured and unstructured data
- Designed end-to-end software workflows from requirement understanding to implementation

- Improved system efficiency by automating manual processes by ~60%
- Tested and validated outputs ensuring reliability and accuracy of solutions

PROJECTS

Emotion-Based Music Recommendation System link *Oct 2025 – Dec 2025*

- Developed software system using Python and PyTorch implementing OOP principles
- Integrated real-time processing using OpenCV for live input handling
- Optimized code for performance and maintainability

Leave Request Management System link *Jan 2026 – Feb 2026*

- Built full-stack application with API integration using Node.js and MongoDB
- Implemented role-based system logic and handled debugging of application issues
- Ensured structured documentation and modular code design

Deepfake Audio Detection System

- Developed deep learning model using Python and attention mechanisms
- Worked with feature extraction and model evaluation pipelines

EDUCATION

B.Tech in Computer Science – Amity University (2022–2026) | CGPA: 8.5
